The invention relates to novel genes (ABV83682-ABV84101) and proteins CC (ABP66710-ABP67129) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are CC isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing CC infectious diseases such as myocardial ischaemias; (d) wound healing CC infectious diseases such as viral, bacterial, fungal and parasitic CC infectious diseases such as viral, bacterial, fungal and parasitic CC infections. Note: The sequence data for this patent did not form part of CC the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21-SEP-2000

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
                                  Claim 1; SEQ ID NO 29256; 44pp; English
                                                        New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                  (LABA/)

Also CC included is a purified polypeptide comprising a sequence corresponding to CC a reading frame of the novel polynucleatide. The nucleic acid sequences CC are useful in diagnostics as expressed sequence tags (EST) for CC identifying expressed genes or for physical mapping of the human genome, CC in forensics, in assessing biodiversities, or in identifying mutations CC responsible for genetic disorders and other traits. The nucleotide CC sequences are also useful as hybridisation probes, as oligomers for PCR, CC for chromosome and gene mapping, in the recombinant production of CC protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antibodies specific for it. The present sequence CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data CC obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623

Also CC included is a purified polypeptide comprising a sequence corresponding to CC a reading frame of the novel polynucleotide. The nucleic acid sequences CC are useful in diagnostics as expressed sequence tags (EST) for CC identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations CC sequences are also useful as hybridisation probes, as oligomers for PCR, CC for chromosome and gene mapping, in the recombinant production of CC protein, or in generating antibodies specific for it. The present sequence CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data CC contained in electronic format directly from USPTO at sequence. html?DocID=20030073623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 1979;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맑
The invention relates to a novel nucleic acid of Arabidopsis thaliana comprising a sequence capable of hybridising under stringency to one capable of hybridising under stringency to one capable of produce in the specification (ABQ85131-ABQ86129). The nucleic acid sequences are useful to identify homologous or related genes, to produce compositions that modulate expression or function of the encoded protein, to map functional region of the protein, to study associated physiological pathways, to genetically manipulate cells and plants. The encoded products are useful oscreen for biologically active agents such as fungicides or
                                                                                                                                                                                                                                                                                                                  New nucleic acid sequences of Arabidopsis thaliana products are useful to produce transgehic plants, t biologically active agents such as fungicides and i

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes a protein related to acyl-CoA:cholesterol cc acyltransferase (ACAT) related proteins. ACAT-like proteins are active in ct the formation of a sterol, ester and/or triacylglycerol from a fatty acyl cook and sterol and/or diacylglycerol substrate. DNA encoding an ACAT-C like protein can be used for modifying the lipid composition of plant cells. The ACAT-like protein has diacylglycerol acyltransferase (DAGAT) activity, and so the synthesis of triglycerides can be suppressed or corrected using the DNA. The protein can be used to produce plant oils contentify antagonists and agonists of DAGAT activity. Such agonists and content associated with DAGAT activity, including diseases associated with Cancer, diabetes, cardiopulmonary diseases associated with Cancer, cardiopulmonary diseases e.g. heart failure, including cancer, diabetes, cardiopulmonary diseases associated with abnormal lipid metabolism, and diseases associated with abnormal lipid metabolism, and diseases associated with abnormal lipid metabolism, and diseases associated with abnormal lipid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of mouse acyl CoA:cholesterol acyltransferase (ACAT) expressed sequence tag (RST) DNA sequence II.

Comouse ACAT EST DNA sequence I is given in AAA88844. Sterol October ACAT EST DNA sequence I is given in AAA88844. Sterol October Strom cholesterol and long chain fatty acids. Recombinant constructs of the invention are used to alter the biosynthesis and accumulation of sterols and tocopherols in transgenic plants. Seeds of such plants may contain elevated levels of stoostanol and/or its esters, and their esters. The seeds may also contain the novel sterol and their esters. The seeds may also contain the novel sterol brassicastanol. Oil obtained from the seeds can be used in food and pharmaceutical compositions to lower levels of low density lipoprotein cholesterol in blood serum. ACAT enzymes can be used in the present invention to produce elevated levels of phytosterol and/or phytostanol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a new substantially purified or isolated nucleic acid or its fragment from a ryegrass (Lolium) or fescue (Festuca) species encodes a diacylglycerol acyltransferase 1 (DGATI) or DGATI-like polypeptide or its fragment or variant. The nucleic acid or nucleic acid fragment and/or its nucleotide sequence information or single nucleotide polymorphism of perennial ryegrass Lolium perenne is useful as a molecular genetic marker or for modifying fatty acid biosynthesis in a plant. The present sequence represents a plant diacylglycerol acyltransferase, DGAT, cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    encoding a diacylglycerol acyltransferase 1 (DGAT1) or DGAT1-like polypeptide, useful as a genetic marker or for modifying fatty acid biosynthesis in a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 400 BP; 91 A; 85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; SEQ ID NO 38; 188pp; English

                                                                                                                                                                                                                                                                       Constiguous amino acids of any of the 27,400 fully defined nucleic expression, comprising any of the 27,400 fully defined nucleotide encoding at least 8 amino acids of any of the 6888 amino acid sequences of fully defined in the specification. The probe is a single exon probe that complements or tragments, and construction acid sequences of fully defined in the specification. The probe is a single exon probe that comprising a plurality of single exon probe that compressed in human cells or tissues. Also included are a spatially-compressed in human cells or tissues. Also included are a spatially-compressed in human comprising a plurality of single exon nucleic acid gene expression (comprising a plurality of single exon nucleic acid gene expression (comprising a plurality of single exon nucleic acid gene expression, a vector comprising the single exon probe cited above, where each of the plurality of plurality), a single contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of acustomer desiring to measure gene expression, a method of providing contends of selling and/or licensing single exon probes or microarrays to contend acids and apparatus are useful in gene corrected actors and acids and apparatus are useful in gene corrected actors and the probes are used in identifying and characterising gross alternative splicing events, in detecting and characterising gross alternatives splicing events, in priming the synthesis of nucleic acids.
                                             seqdata.uspto.gov/sequence.html?DocID=20030194704
                                                                                       or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                      smaller genomic alterations,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 25717; 80pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              03-APR-2002; 2002US-00029386

It is also useful for the cc identification and selection of a bovine having one of the polymorphisms cc in its DGAT1 gene. Milk produced from selected bovine which is useful for making a dairy product provides a beneficial health effect. An antibody crothe protein having DGAT1 activity is useful for inhibiting the cc activity of bovine DGAT1 in a lactating bovine so as to modulate milk production and/or milk solids content. DGAT1 nucleic acid and its cragments are useful to investigate the molecular basis of DGAT1 action and to test a substance for the ability to prevent, co salidate making activity. The present sequence is bovine DGAT1 gene

                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a partial sequence of a polynucleotide CC encoding an acyl-CoA:cholesterol acyltransferase (ACAT) related protein. CC The ACAT-like protein is active in the formation of a sterol, ester CC and/or triacylglycerol from a fatty acyl-CoA and sterol and/or CC diacylglycerol substrate. The DNA can be used for modifying the lipid CC composition of plant cells. The ACAT-like protein has diacylglycerol cc acyltransferase (DAGAT) activity, and so the synthesis of triglycerides CC can be suppressed or increased using the DNA. The protein can be used to CC produce plant oils with a modified triglyceride content. The products can CC also be used to identify antagonists and agonists of DAGAT activity. Such CC ameliorating diseases associated with DAGAT activity, including cancer, diabetes, tardiopulmonary diseases e.g. heart CC associated with altered cellular diacylglycerol concentration or PKC astivity, including cancer, diabetes, tardiopulmonary diseases e.g. heart CC fibroblatoma, metabolic disorders, obesity, diseases associated with CC abnormal lipid metabolism, and diseases associated with abnormal fat CC absorption, lipoprotein secretion and adipogenesis

No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                Score

Title: Perfect score:

Scoring table:

Run on:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                 LENGTH: 489

TYPE: PRT
ORGANISM: Bos taurus
FEATURE:
NAME/KEY: VARIANT
LOCATION: (232)..(232)
OTHER INFORMATION: ases 7224-7225 of the genomic sequence (measured from the adening OTHER INFORMATION: residue of the translation start codon). Lysine (K) corresponds
OTHER INFORMATION: to the Q allele, alanine (A) corresponds to the q allele.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        415
